

KIWO® SCREENBRUSH

Special brushes for screen printing

The KIWO screen brushes are used to transfer screen printing chemicals onto the stencil. The brushes' bodies are made of chemical resistant plastic, the bristles of monofil plastic threads. In order to prevent contamination of the bristles, their ends are not spliced. The different lengths of the bristles are adapted to the dedicated purpose of the brush and optimize the transfer of chemical products onto the stencil without mechanical damage.

An ergonomical shaped handle facilitates a non-tiring handling of the brushes. At the end of the handle there is a hole to suspend the brushes after use. For each application the brushes are marked on their back. The colour is an additional control for the user.

The range of KIWO screen brushes

SCREENBRUSH # 1	SCREENBRUSH # 2	SCREENBRUSH # 3	SCREENBRUSH # 4
Degreasing	Intermediate treatment	Decoating	Post-treatment
Colour of the bristles: white	Colour of the bristles: blue	Colour of the bristles: green	Colour of the bristles: red
Bristles: long	Bristles: long	Bristles: long	Bristles: medium
Hardness of the bristles: soft	Hardness of the bristles: soft	Hardness of the bristles: soft	Hardness of the bristles: medium

Hints and tricks

Depending on the application of the brush, the used chemicals can either be acids, alkalines or solvents. It is therefore recommended to clean the brushes thoroughly after use. This does not only increase their durability, but also prevents the transfer of contamination onto the stencil. In most cases, rinsing with water is sufficient.

In order to optimize the use of the KIWO SCREENBRUSH do not lay the brushes on the bristles to prevent their deformation. Suspend the brush to allow liquids to run off. Immediately replace brushes which have sticky, cut or missing bristles.
